Customer Reviews

This is the second time I have bought this book. I used it during nursing school to develop care plans when I did the mental health rotation. After I graduated I sold it, never expecting to work in psychiatric nursing. The future is often strange and unpredictable as I am now doing just that. This book is clear, easy to follow, with easy to read type. It will be very helpful and handy on my new job. The size is also an advantage as it can fit in my pocket, purse, bag, etc. I would also recommend this book for nurses who work in the ER as many of the patients have psychiatric issues acute, chronic and temporary.

Great book. Helped me get my RN license.

Exactly as ordered. Easy to read with great content.

helped me a lot

We really didn't use this book in Mental Health a whole lot. Plus I don't know how helpful it would be to someone who is a little more experienced and choosing to go into the field. It has decent care plans and is an excellent resource for psych drugs. Davis Drug Guide doesn't necessarily cover 100% of potential side effects in psych drugs. This goes into a little more depth. I gave it 4 stars instead of 5 because I don't really know if it was worth the price for my level. I could have gotten a comparable care plan from a more general care plan book (like Taylor and Sparks), and I think the drug information may have turned up on a good Google search. If you have a really intense need to write incredibly involved care plans for your class, this might fit the bill. Otherwise just go and buy a good general care plan book used and save some money.

great

This book is small in size but huge in usefulness. It gives a short explanation of different Psy conditions AND the definition, R/T, AEB, long and short term goals, with interventions and rationales. The rationales are not credited to outside sources. This is a complete care plan maker. It is small enough to be complete and carry in your bag without breaking you back. My favorite nursing book ever.

Very useful to me in my work, though I don't often write care plans solo, it's handy to have common

nursing diagnoses at my fingertips.
