Tropical Agroforestry

Synopsis

Agroforestry is the cultivation, by farmers, of trees or other woody plants with crops or pasture. Its scientific study is attracting great interest and increasing funding because of its potential to produce sustainable agricultural systems and agroforestry is now included in most university and college courses covering land use subjects. *Tropical Agroforestry* is the first book that provides an analytical account of the principles, as well as the practices, of agroforestry within the context of the needs of land occupiers and, in so doing, describes the various specialist aspects that are now emerging as part of this discipline. The main objective throughout the book is to present, in a readable way, the underlying functional basis of woody/non-woody plant mixtures and to give a balanced account of how agroforestry can contribute to sustainable production from land. Understanding the biology of multipurpose trees is a key to this.

Book Information

Hardcover: 384 pages

Publisher: Wiley-Blackwell; 1 edition (March 22, 1999)

Language: English

ISBN-10: 0632040475

ISBN-13: 978-0632040476

Product Dimensions: 7.8 x 1.1 x 10.1 inches

Shipping Weight: 2.8 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 1 customer review

Customer Reviews

"This book provides comprehensive analytical accounts of the principles as well as the political implications of agroforestry." (Abstracts of Public Administration, Development and Environment, 99/00, p.42)

Agroforestry is the cultivation, by farmers, of trees or other woody plants with crops or pasture. Its scientific study is attracting great interest and increasing funding because of its potential to produce sustainable agricultural systems and agroforestry is now included in most university and college

courses covering land use subjects. Tropical Agroforestry is the first book that provides an analytical account of the principles, as well as the practices, of agroforestry within the context of the needs of land occupiers and, in so doing, describes the various specialist aspects that are now emerging as part of this discipline. The main objective throughout the book is to present, in a readable way, the underlying functional basis of woody/non-woody plant mixtures and to give a balanced account of how agroforestry can contribute to sustainable production from land. Understanding the biology of multipurpose trees is a key to this.

I would highly recommend this book to anyone seriously interested in pursuing tropical agroforestry. It is full of information, covers social and political ramifications and obstacles to tropical agroforestry, BUT, it is USD114, which is quite high. Having said that, it is a fantastic book and well written, refuting some of the hype of the 1980s, but still very optimistic about agroforestry. For anyone who wants to know the nuts and bolts of these systems, this is your book. I work in organic cacao production, and know much about TA, however, nearly every page has me learning new things, realizing that the problems we face here are problems shared by others elsewhere, or seeing things in a new light. The writer is well informed and clearly empathizes with small scale producers.
