Do You Believe In Magic?: Vitamins, Supplements, And All Things Natural: A Look Behind The Curtain

Synopsis

In *Do You Believe in Magic?*, medical expert Paul A. Offit, M.D., offers a scathing exposé of the alternative medicine industry, revealing how even though some popular therapies are remarkably helpful due to the placebo response, many of them are ineffective, expensive, and even deadly. Dr. Offit reveals how alternative medicine—“an unregulated industry under no legal obligation to prove its claims or admit its risks”—can actually be harmful to our health. Using dramatic real-life stories, Offit separates the sense from the nonsense, showing why any therapy—“alternative or traditional”—should be scrutinized. He also shows how some nontraditional methods can do a great deal of good, in some cases exceeding therapies offered by conventional practitioners. An outspoken advocate for science-based health advocacy who is not afraid to take on media celebrities who promote alternative practices, Dr. Offit advises, “There’s no such thing as alternative medicine. There’s only medicine that works and medicine that doesn’t.” •

Half of all Americans use some form of alternative medicine—“megavitamins and supplements, acupuncture, homeopathy, faith healing, chiropractic manipulation. The popularity of these treatments is multifaceted. Many people believe natural remedies are safer and better than formulated pharmaceuticals. Some folks crave the personalized attention and extended time that alternative healers provide compared to conventional doctors, who might be hurried or aloof. Still others find alternative therapies to be spiritual and empowering. Physician Offit counters, “Don’t give alternative medicine a free pass. Concentrate on the evidence. Any treatment—conventional or alternative—should be subjected to high standards of proof. The

influence of money, celebrities, and politics props up alternative medicine. Desperation sometimes plays a role, too, as does disenchantment with mainstream medicine. He cites solid scientific studies that refute any benefit of vitamin C, ginkgo biloba, and saw palmetto in preventing the common cold, memory loss, or urinary symptoms, respectively. Offit praises the power of the placebo responseâ "a major reason why some alternative medicine treatments actually work. --Tony Miksanek --This text refers to the Hardcover edition.

Interesting read giving reader lots to think about. Shows both sides of this story between modern medicine and alternative Medicine.

An excellent fact based expose of a problematic industry.

A must read if you're into fitness and are currently taking supplements!

I've often wondered where certain alternative treatments came from, and whether they were worth the expense and effort. I've thrown more than a few useless and expensive remedies away in fits of anger both at myself and the ND, nutritionist, acupuncturist or chiropractor who recommended them so confidently. While not a complete collection of the bad actors out there, this is a well written highlight reel of the worst offenders to avoid, who knowingly play on our vulnerability in our darkest hours.

Funny to read about all the health craze we have all heard of in a clear and concise way. However, the read is a bit heavy because if so many examples shared. You get the point after one or two. No need for 10 of them.

Very fun read.

I think that this is a very interesting book. His sources are cited making it easy to look up the research.

Please, PLEASE, read this book before you buy all the holistic junk medicine out there. Or, if you really can't spare the time, here's a shortcut: any time you see a supplement that has the words "These claims have not been verified by the FDA and is not intended to diagnose or treat any disease" it means the product is junk and a waste of money. The only value is as a placebo--that is, if you really truly believe the product will help you then it will, somewhat. But then so would a sugar pill.
