# Opposing Viewpoints Series - Energy Alternatives (hardcover Edition)

## Synopsis

Energy shortages in the West have rekindled the debate about whether the United States should turn to alternatives to fossil fuels. Authors argue the merits of nuclear power, wind energy, and electric cars in the following chapters: Are Alternatives Energy Sources Necessary? Is Nuclear Power a Viable Energy Alternative? What Alternative Energy Sources Should Be Pursued? Should Alternatives to Gasoline-Powered Vehicles Be Pursued?

Gr. 6-12. Using recent problems in California as a rationale for exploring alternative energy sources, this entry in the Opposing Viewpoints series features the usual roundup of thoughtful viewpoints and wealth of resource material. Section one includes articles that debate the abundance and danger of fossil fuels. Pieces in section two address alternate energy sources, including solar power, fuel cells, methane hydrates, geothermal energy, and wind farms ("Why I Hate Wind Farms and Think There Should Be More of Them"). Though the book will mainly attract students and environment-conscious readers, the section on alternatives to gasoline-powered vehicles may interest a broad audience; essays discuss several fuel possibilities, including "biomass" (garbage). Intriguing for readers who want the latest on how things may shape up in the future. Discussion questions and organizations to contact are appended. "Long-standing series about controversial contemporary issues continue(s) to turn out exceptional titles. Greenhaven's Opposing Viewpoints presents multiple perspectives on hot topics such as abortion, the death penalty, and censorship through excerpts from primary materials ranging from speeches to cartoons." -- Booklist (October 2001) (Booklist 20011015)"The format and approach are identical to other titles in the series; both sides of a particular issue are explored in depth. Each essay is prefaced by questions that will help students focus their reading and each chapter concludes with suggestions for further reading and research. Students will find the articles helpful in examining these controversial and often emotional issues." -- School Library Journal (August 2002) (School Library Journal 20020801)"As usual for books in this series, there are plenty of follow-up sources for students to pursue." -- Booklist (June 2002) (Booklist 20020615)"The language is understandable but not simplistic, the pieces are clearly titled for easy identification, and a few cartoons and charts break up the dense text. This unbiased collection is a welcome resource for researchers and debaters." -- School Library Journal (June 2002) (School Library Journal 20020601)"Written by educators, scientists, journalists, doctors, veterinarians, members of the clergy and advocates. This excellent volume will elicit group discussion and help to develop critical thinking and analysis of sensitive issues." -- School Library Journal (May 2002) (School Library Journal 20020501)"This supplemental reader is perfect for getting students involved in discussion. The resulting debates are sure to reinforce any primary readings and will breathe life into any standard lecture oriented course. This supplement is a useful tool for instructors to get students involved." -- Crime and Justice International (May 2002) (UNKNOWN 20020501)"As always in the Opposing Viewpoints series, there are voices from many sides of the debate." -- Booklist (April 2002) (Booklist 20020415)"Most present clear, fact-supported points that readers will find valuable for speeches and reports. Editorial cartoons, anecdotes, and statistics break up the essays, make reading easier. This is a well-balanced approach to the issues, argued with studied analysis rather than bind emotion." -- Booklist (April 2002) (Booklist 20020401)"This series is invaluable for preparing students for debates, classes, or research assignments. Opposing Viewpoints books help prepare high school students for critical thinking and make them aware of issues that affect society today. Recommended." -- The Book Report (March-April 2002) (Book Report 20020401)"Most useful in schools with religion and/or philosophy courses, but should also appeal to general readers." -- School Library Journal (April 2002) (School Library Journal 20020401)"Well-balanced collection of essays. Sometimes complementary, sometimes contradictory, the many views clearly articulated here make this volume an excellent starting place for any thoughtful discussion." --

Booklist (February 2002) (Booklist 20020215)"This Opposing Viewpoints selection uses essays that swing wildly toward extremes to cover the topic. The writing becomes even more heated in the following sections...The shocking arguments and sometimes-blatant absurdity makes nearly all the essays compelling reading, with students needing only a glimpse at an article's title to determine tone and subjectivity of the author. Most essays are short, get right to the core of their arguments, and blast readers with examples that fit the emotional topic." -- Booklist (September 2001) (Booklist 20010915)"Using recent problems in California as a rationale for exploring alternative energy sources, this entry in the Opposing Viewpoints series features the usual roundup of thoughtful viewpoints and wealth of resource material...Intriguing for readers who want the latest on how things may shape up in the future. Discussion questions and organizations to contact are appended." -- Booklist (July 2002) (Booklist 20020701)

I have always believed that when you are researching things, you need to have opposing views in your research. This book was very helpful in allowing me to see that the green movement is not all it's cracked up to be. It shows some of the effectiveness of alternative energies that may be green, but don't really amount to much. You may not sway a hard and true greenie with this information, but for those of you who have balance in mind, it gives you sensible arguments on the "global warming" push to be green.

Chapters in the book include are alternative eneergy sources necessary? is nuclear power a viable enrgy alternative? what energy alternative sources should be pursued? should alternative alternative to gasoline powered vehicles be pursued? this book contains topics on wind, solar, methane, and geothermal power information. why not pursue more of this power. it costs a lot more money than burning fossil fuels but these alternate energy sources dont hurt the enviroment. you be the one to chose which is better. This book also contains many arguements on nuclear power and questions about oil and gas reserves and how we cant live without them. Read this book. it is very informative and has both sides to the arguement.
