AVASTIN (Bevacizumab): Treats Cancer, Including Colorectal, Lung, Glioblastoma, Kidney, Cervical, And Ovarian Cancer

Synopsis

Although, your health condition may impact your everyday life, do not let it define who you are. AVASTIN (Bevacizumab) injection is given with other medicines to treat patients with metastatic (a cancer that has spread) carcinoma of the colon or rectum. This medicine is also used to treat a certain type of metastatic lung cancer called nonsquamous, non-small cell lung cancer, and a certain type of brain tumor called glioblastoma. AVASTIN (Bevacizumab) is a substance that helps the body fight cancer. It prevents the growth of certain types of blood vessels to cancer cells. This helps to decrease the growth of cancer cells by starving the cells of nutrients that are needed to grow. AVASTIN (Bevacizumab) injection is also used in combination with other medicines (eg, interferon alfa) to treat patients with cancer of the kidney that has spread to other areas of the body. It is also used in combination with other medicines (eg, paclitaxel and cisplatin, or paclitaxel and topotecan) to treat patients with cancer of the cervix that has spread to other areas of the body. This medicine is also used in combination with other medicines (eg, paclitaxel, pegylated liposomal doxorubicin, or topotecan) to treat patients with platinum-resistant, recurrent epithelial ovarian, fallopian tube, or primary peritoneal cancer. Thanks and may you have a good understanding about this drug "AVASTIN (Bevacizumab). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
